

## SPACE QUEST

January 2009

### LASER LAND OF LONG ISLAND Commack, NY

The owners of Laser Land of Long Island contacted the Theme Factory to create a futuristic themed environment for their 5,300 square foot multi-level laser tag attraction.

The first phase of the project included the installation of an engineered steel play structure to create the second level playing area inside the arena. This structure was designed around their specific seismic zone and featured two switchback ramps on either side to gain access and an open area in the center to allow our 16 foot tall Reactor Core prop to reach through from the first floor. The next phase included the installation of a myriad of high-tech props, durable maze obstacles, and perimeter wall artwork that transported guests to a landscape of the future.

The entrance to the attraction was also themed with our Matrix Gateway arch which surrounds guests with interior illuminated cabinetry and glowing acrylic on their way through to the themed Briefing and Vesting areas.
